

The City of Bayard has begun spraying insecticide for mosquito control. The West side of Bayard will be sprayed on Mondays and Thursdays. The East side of Bayard will be sprayed on Tuesdays and Fridays. Spraying will begin no earlier than 7:00 P.M. on each designated day. Adverse weather conditions, such as high winds and rain will cause a postponement of the spraying for the day, and will possibly be rescheduled on an alternative day. As a precaution, the City is asking all residents to close their windows during this time.

The City will be using the same insecticide this year, and will be spraying the product in the streets and alleys. For more information on the product, Mosquitomist 1.5 ULV, please click on the link below for a copy of the Material Safety Data Sheet or stop by the City Office at 445 Main Street.
